ALUKON'S LIGHT GUIDING SLATS

FOR INTELLIGENT USE OF DAYLIGHT

With the LS 80 from ALUKON, rooms shine in a pleasant light. It enables glare-free enjoyment of sunlight with maximum use of daylight. The light is directed to the ceiling and floods the room.

Summer heat rays are deflected by the slats and in winter it helps to use solar energy and the sunlight level. This is done automatically in the predefined light guiding position of 20°. Continuous readjustment is not necessary.

The light guiding slats have good closing action and also allow adequate darkening during the day. At night, the closed slats protect against view from the outside, even if it is brightly lit inside.

SUN PROTECTION WITH VISION

LIGHT GUIDING SLATS LS 80 - THE MOST IMPORTANT POINTS AT A GLANCE

Sun protection

pleasant indoor climate
even on hot summer days

View

high visibility from inside
looking outside

Glare protection

Daylight is directed glare-free
into the room

Daylight control

more daylight in the room
thanks to special slat contour

Privacy protection

opaque even with illuminated
interior

Darkening

optimum closing action

Save energy

less room cooling and better use of daylight

Stability

improved slat stability due to geometry

Efficiency

Slat design makes solar energy usable even in winter

Ease of use

the systems can be opened and closed independently using automation

Facade design

Light guiding slats LS 80 available in ten trendy colours

Made in Germany

durable, high-quality materials

**PERFECT
DAYLIGHT INTAKE**

WITHOUT GLARE

With the LS 80 light guiding slats the sun rays can be "captured" and deflected into the room in a subdued manner for a feel-good atmosphere.

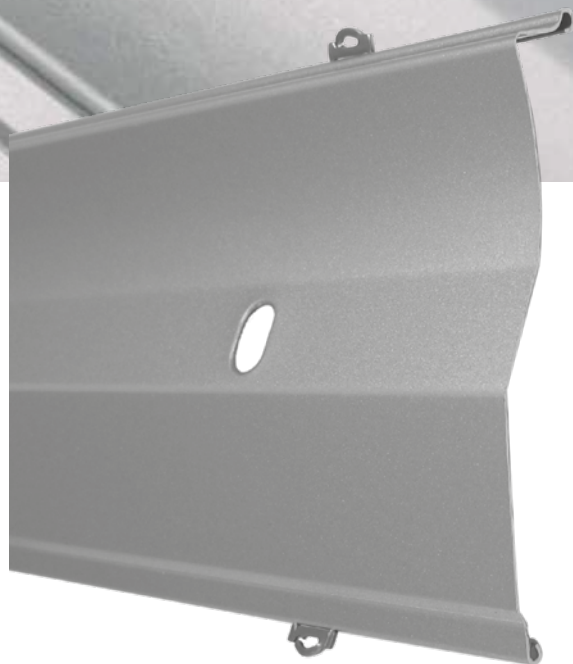

LS 80

LIGHT GUIDING SLATS

External venetian blind with special design

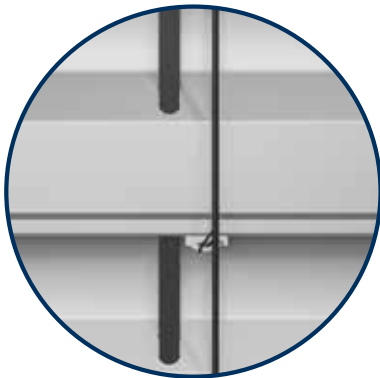

The partially concave slats, which are flanged on both sides, are additionally provided with a piping on the lower edge flanging. On the one hand, this absorbs the closing action and wind noises and, on the other hand, it optimally seals the slats so that they lie one above the other.

PARTICULAR DETAILS

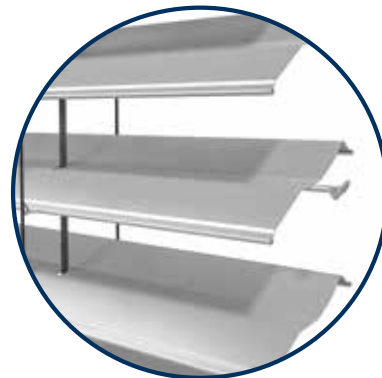

WITH PERFECT FUNCTION

The ALUKON LS 80 light guiding slats are based on many years of experience in shadowing and are one of the most innovative sun protection products with a great technical know-how right down to the smallest detail. It is moved via filigree, space-saving loop cords and can be used in track and cable guides.

Vertical Tex tape punching

in a flanged design. This is covered in the best possible way by the Tex tape when closed and therefore few light passes through.

Guide nipple in the shape of a ship's propeller

Alternately attached to the slats, these ensure the best stacking action.

LIGHT CONTROL AND DESIGN

THANKS TO INNOVATIVE SLAT CONTOUR

The special slat shape is designed as a modern design element in a kind of "headlight principle". This ensures optimal light control, which is most effective with bright slat colours.

closed slats

Good darkening of the rooms thanks to special closing action.

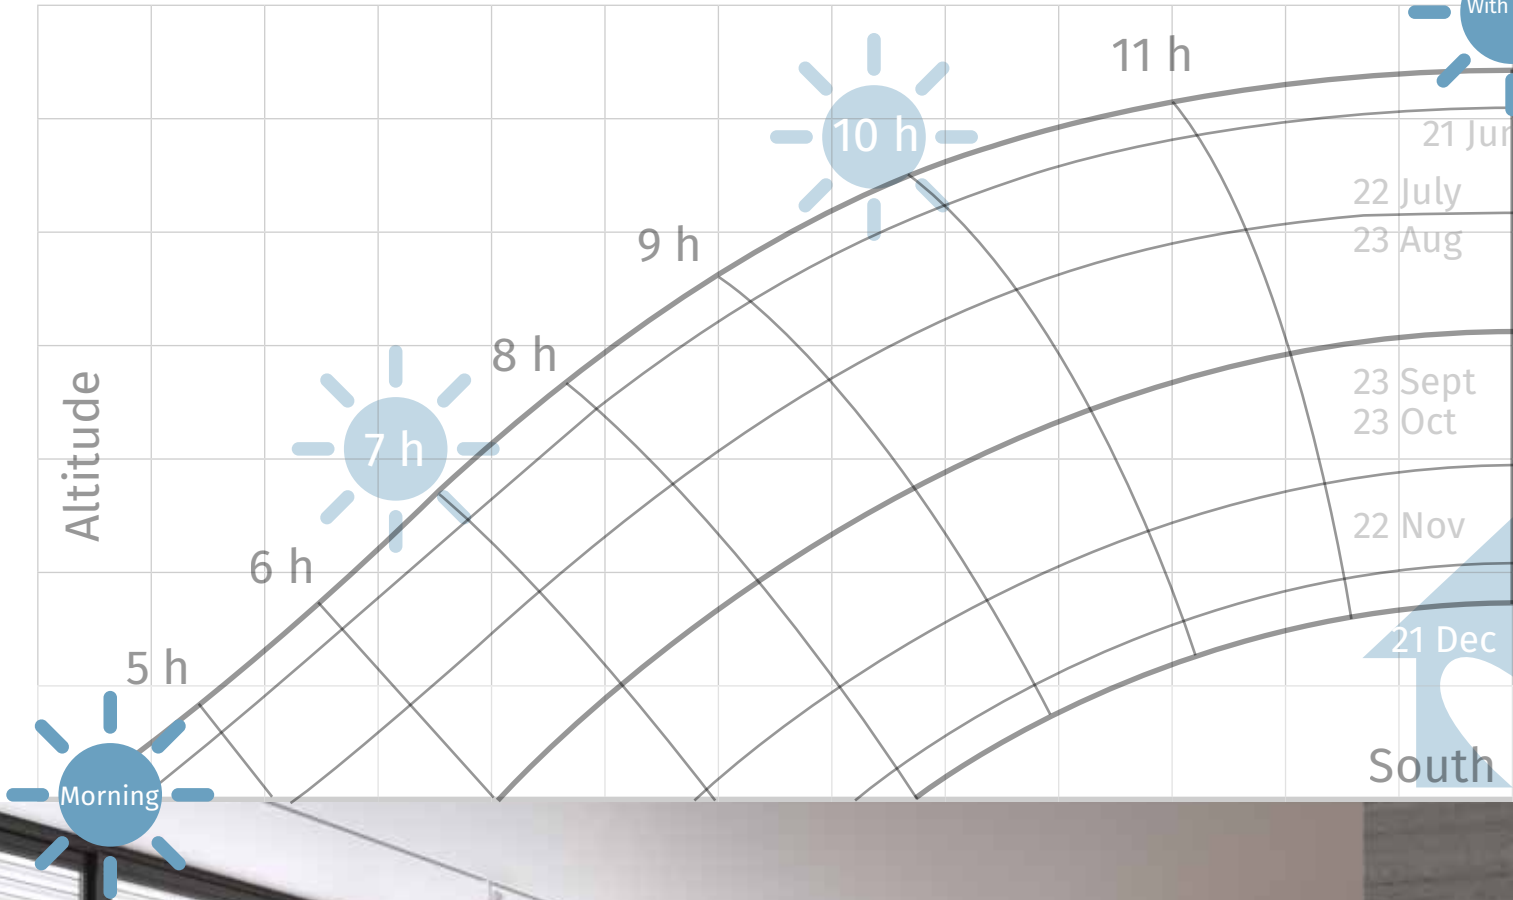

20° light guiding position

Glare-free slat position with the best possible view to the outside.
Tracking is not necessary.

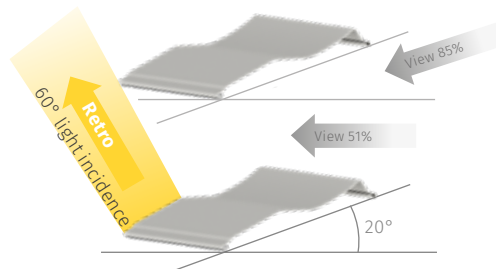

LIGHT CONTROL

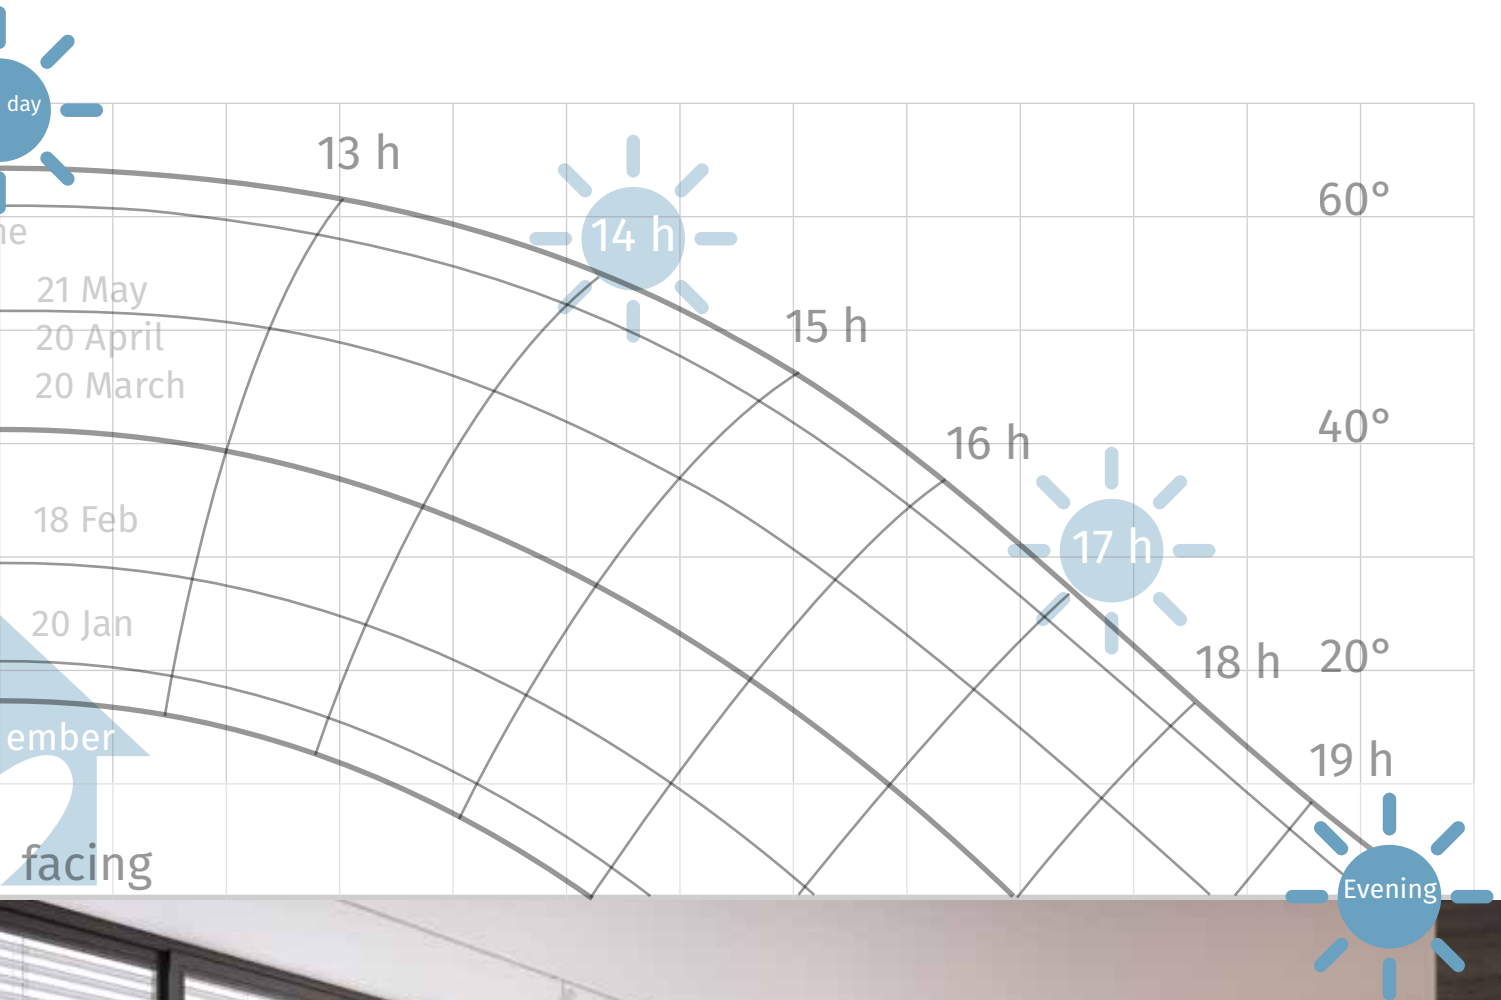

MODE OF OPERATION OF THE LS 80

midday in summer

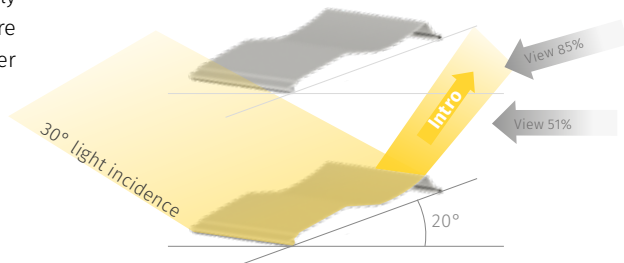

The steep and hot rays of sunlight are reflected back, so the heat stays outside, the room is not unnecessarily heated and the view to the outside is retained. Indirect light also brightens the room without disturbing, dazzling rays of sunlight.

midday in winter

The flat rays of sunlight are reflected completely inwards across the slat contour without glare and illuminate the room in an optimum manner while using the solar radiant heat.

F 80

FLAT SLATS

C/CV 80

FLANGED SLATS

THE ALUKON SLAT PROGRAMME

TAILORED TO YOUR NEEDS

External venetian blinds are all-rounders in the field of sun and privacy protection. They illuminate the room in particularly soft, glare-free light and allow a sufficient view to the outside, while conversely they maintain privacy from outside.

The slats in front of the window provide good heat protection in summer and can also increase the solar energy and daylight level in the room in winter when the sun is shining. They can be continuously controlled and adapted to the respective situation, right up to blackout with privacy function from outside to inside. In order to cope with weather conditions such as strong sunlight, wind and weather, the ALUKON venetian blind slats are made of particularly high-quality, corrosion-resistant aluminium. In order to meet the different requirements, we have four different slat shapes in our product range.

F 80 slats

space-saving, light and beautifully shaped design with low stack height

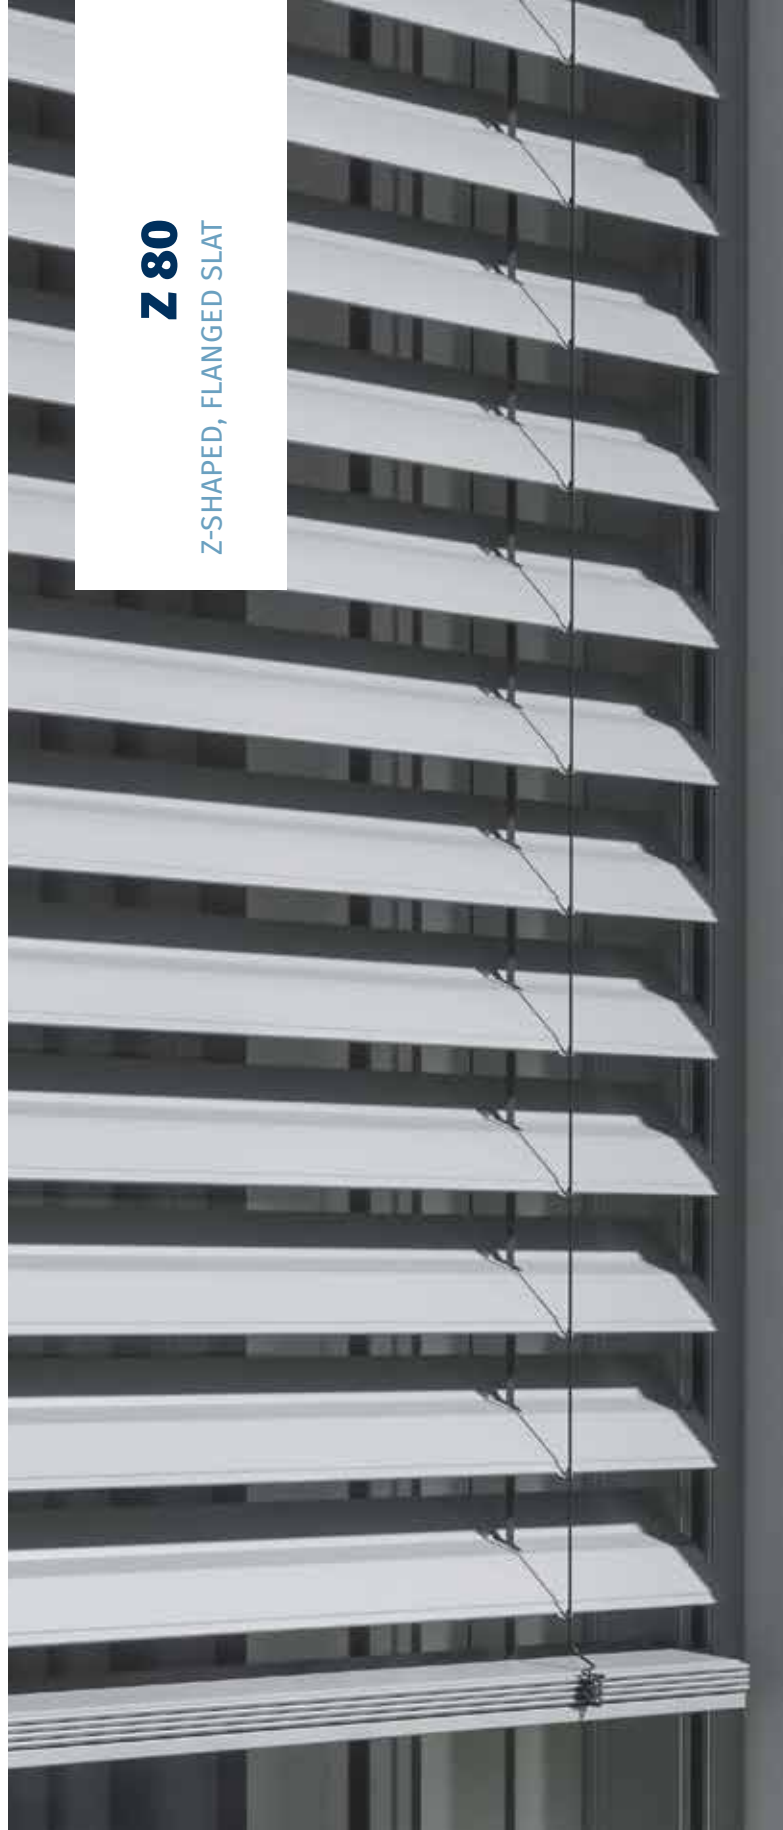

C/CV 80 flanged slats

flanging on both sides makes the slat more stable, in offset stacking CV 80 requires less space than with standard stacking of the C 80 slat

Z 80

Z-SHAPED, FLANGED SLAT

**LS 80**

LIGHT GUIDING SLATS

**Z 80 slats**

stable z-shaped slat contour with flanging on both sides and piping on the underside for noise reduction and better closing action, well suited for darkening

**LS 80 light guiding slats**

particularly designed slat contour for optimal light control at all times of day and year, fitted with sealing piping in the lower flanging and therefore sound-absorbing and well suited for darkening

CONVENIENT OPERATION

THE RIGHT ONE FOR EVERY APPLICATION

Whether you are planning to build a new engine or retrofit a renovation, with modern radio-controlled motors you have all the functions in your hand and can conveniently control individual venetian blinds or groups from your sofa or desk.

With automatic controls, the sun shading systems fully open and close automatically – even when you are not at home.

Radio control

Radio drives with hand-held transmitters or timers offer extra comfort

Automation

With suitable drives, sun protection systems are Smart Home compatible and can be integrated into existing house controls

MOTOR DRIVES

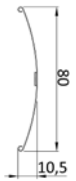

THE COMFORT GAIN FOR YOU

External venetian blind systems are always included with convenient electric drives.

Systems which are to be installed in places where no electrical connection is available, can also be equipped with bevel gears.

ALUKON
Sonnenschutz Rollläden Insektenschutz

ALUKON SUN PROTECTION, ROLLER SHUTTERS AND INSECT SCREENS

QUALITY PRODUCTS MADE IN GERMANY

ALUKON is one of the leading German manufacturers of roller shutters, sun and insect protection products. Our production takes place at two locations in Konradsreuth in Upper Franconia and Haigerloch in Swabia.

ALUKON products are developed with great commitment and a high level of innovation and are made to measure from high-quality and durable materials, whether for modernisation or new construction.

Find the right product and colour variety for your needs and choose from a wide range of additional options. We offer you customised complete solutions from a single source.

With ALUKON products, you can individually adapt the privacy, indoor climate and lighting mood in the room.
